General Comment

As a nutritionist, detox specialist and a mom of a boy with neurological disorders, I am very opposed to even the slightest toxic chemicals in our food supply. It is not the individual chemical dose, but the long term accumulation of the chemicals in our food, air, water and environment that are interfering with our human capacity to function.

When these chemicals build in our tissues and cells they compromise our neurological function, our hormones, and our immunity. They are also passed down to our children as validated by a study done by the non profit Environmental Working Group. <http://www.ewg.org/research/body-burden-pollution-newborns>

Our childrens' allergies, neurological issues, and early chronic illness has never been more prevalent.

Meanwhile, we see Indigenous cultures throughout the world thriving without Western influence in part because they still have pure food, soil, water and air.

Our childrens' toxic environment is a serious disadvantage.

Please rescind the license for glyphosate Roundup.

Thank you!
